**Xplor with friends.**

With its ears attuned to danger, a gray fox stops to figure out if the path ahead hides a meal or a menace. Missouri's most colorful wild canine has a squirrel-like skill: It can scamper up trees to escape predators, find food, or nap on sunny branches.

# STRANGE BUT TRUE

Your guide to all the  
**UNUSUAL, UNIQUE,**  
AND **UNBELIEVABLE**  
stuff that goes on in nature

On average, a **SNOW GOOSE** goes to the bathroom every four minutes. With literally millions of snow geese in existence, these super poopers leave tons and tons of droppings.

## THIRTEEN-LINED GROUND SQUIRRELS

spend more than half their lives hibernating. The drowsy squirrels crawl into their burrows in October, fall deeply asleep, and don't wake up until April.

**GREAT HORNED OWLS** don't give a hoot about cold weather. The hardy hunters start nesting in January, earlier than any other bird in Missouri. Their eggs can survive temperatures of 10 degrees below zero.

**MOURNING CLOAKS** are among the first butterflies to flutter by in spring. They suck sap, which flows best when it's warm during the day and freezing at night. It's not uncommon to see the rugged butterflies flying when there's still snow on the ground.

Many **WOODPECKERS** have crazy-long tongues that they use to probe inside hammered-out holes. The tongues are needle-sharp — perfect for skewering bugs — and barbed at their tips so dinner can't wiggle off.

Some of Missouri's oldest living trees are **EASTERN RED CEDARS** growing in untouched corners of the state. Several are nearly 900 years old, which means they sprouted more than 600 years before the United States became a country.

Female bunnies want brawny boyfriends. To show off, **EASTERN COTTONTAILS** box and bite each other. Sometimes, one of the flop-eared fighters will leap high into the air and try to kick his opponent in the head.

# WHAT IS IT?

DON'T KNOW? Jump to page 21 to find out.

- 1 My head is topped by a crest.
- 2 And I always dress to impress.
- 3 My stout beak puts seeds to the test.
- 4 And I sing with high-spirited zest.

## Ask an OPOSSUM

Hi! I'm Phi, *Xplor*'s mail possum. I know a lot about nature. If you have a question, email me at [AskPhi@mdc.mo.gov](mailto:AskPhi@mdc.mo.gov).

**Q:** Can groundhogs really predict the weather?  
— From Allie Rae, age 8

**A:** In October, groundhogs curl up in burrows to hibernate. They begin waking in February and spend more time aboveground as the weather warms. Legend says if a groundhog sees its shadow on February 2, we'll have six more weeks of winter. But that's nonsense! America's most famous furry forecaster, Punxsutawney Phil, gets it right only four out of ten tries. You'd have better luck flipping a coin! Whatever a groundhog sees that day, it's a safe bet the groggy guy just wants to go back to bed.

# HOW TO

## BAKE A CAMPFIRE COBBLER

**T**his yummy cobbler baked over campfire coals will make your taste buds turn cartwheels.

A Dutch oven is a heavy iron pot with a tight-fitting lid. It's used for making all kinds of dishes, from beef brisket to sourdough bread. Although it's too heavy to carry in a backpack, it's perfect to bring along when you're car camping.

## HERE'S WHAT YOU NEED

- 1 package yellow cake mix
- 2 cans of fruit pie filling
- 1 can of lemon-lime soda
- 4 tablespoons of butter
- 12-inch Dutch oven
- Lid lifter for Dutch oven
- Heavy-duty aluminum foil
- Spoon for serving
- Extra-long kitchen tongs
- Thick leather gloves
- Charcoal (optional)

## HERE'S WHAT YOU DO

- Let a campfire burn down to glowing orange coals or light a pile of charcoal.
- Line the inside of the Dutch oven with aluminum foil. This will make cleanup much easier!
- Spoon pie filling into the bottom of the oven. Layer cake mix over the top. Flake butter over everything. Pour in the soda, but don't mix the ingredients.
- Put the lid on the oven and pull on leather gloves. With a grown-up's help, use tongs to evenly space eight large coals (or charcoal briquettes) in a small circle and set the oven on top of them.
- Arrange 16 coals on the oven's lid. Let the cobbler bake for 30 minutes, then lift the oven off of the bottom coals.
- Leave the top coals on the lid and bake for 15 more minutes or until the cobbler turns golden-brown.
- Let the cobbler cool for 10 minutes  
— IF YOU CAN WAIT THAT LONG!

# CONSERVATION

Conservation is a big word for a simple idea. It means taking care of nature so kids like you — and your kids and their kids and all who come after — can explore a fall forest, fish in an Ozark stream, or watch an eagle soar over a foggy marsh. Conservation means leaving nature better off than when you found it.

Here are a few things you can do throughout the year, by yourself or with a grown-up, to give nature the boost it needs.

## WINTER

### *Bash Some Trash*

Pick a trail or wild place near your house and promise to keep it trash-free for the rest of the year.

### *Feed Your Feathered Friends*

Birds search for seeds all winter long. By February, pickings are slim, and feathered foragers welcome an easy meal. Setting up a bird feeder is a great way to keep your beak-tipped buddies happy and flappy. For tips on where to put your feeder and what to fill it with, fly over to [short.mdc.mo.gov/ZCS](http://short.mdc.mo.gov/ZCS).

### *Recycle Your Christmas Tree*

After the holidays, strip your Christmas tree of ornaments and tie a concrete block to its trunk. Ask a grown-up to help you drag the tree onto a frozen pond. (Don't walk on ice unless it's at least 8 inches thick!) When the ice melts, the tree will sink and become a place where fish can hide from predators, rest in safety, and raise their babies.

### *Stack Some Sticks*

Brush piles are like critter hotels. Cozy crannies between branches offer "rooms" where rabbits, sparrows, and other animals take shelter. To build a brush pile, ask a grown-up to cut down branches. Stack the thickest branches at the bottom and pile smaller ones on top. Keep stacking until you have a tangly pile about head high and 20 feet wide.

### *Build a Nestbox*

Eastern bluebirds begin raising babies in early March. Make sure they have a home *tweet* home by building a nestbox. Grab a grown-up to help with construction and download the building plans at [audubon.org/news/how-build-bluebird-nest-box](http://audubon.org/news/how-build-bluebird-nest-box).

# YOU CAN DO

Eastern tiger swallowtail

## SPRING

### *Plant a Tree*

Arbor Day, which Missourians celebrate on the first Friday in April, is about appreciating trees. Trees clean the air, keep soil from washing into rivers, provide homes for animals, and offer shade to people. What's the best way to celebrate this leafy holiday? By planting a tree, of course! For tips, branch out to [mdc.mo.gov/trees-plants/tree-care](http://mdc.mo.gov/trees-plants/tree-care).

American robins

### *Leave Little Critters Alone*

Late spring is when baby animals start turning up in backyards. Keep your pets inside so they can't harm these easy-to-catch critters. And if you find a baby bird, newborn bunny, or small fawn, leave it alone. It isn't abandoned. Mom's probably hiding nearby and won't return until you leave.

### *Push Back on Pesticides*

Pesticides are chemicals used to kill weeds and pesky insects. But they also harm good plants and helpful insects like bees and butterflies. This spring, ask your parents to spray fewer pesticides or avoid using them altogether.

### *Prevent a Crash Landing*

Glass is often invisible to birds, and up to a billion die each year when they fly headfirst into windows. Most crashes occur during spring migration. To prevent them, paint a picture on the outside of large windows. Use washable tempera paint, which is long-lasting but comes off with a damp sponge and some scrubbing.

Purple martin

### *Beware of Speed Bumps*

In April, box turtles trudge across roads to look for mates and places to lay eggs. You can help them make it across safely.

First, make sure it's safe to be on the street. Then, pick up the turtle by the back of its shell and carry it to the side of the road in the direction it was going. Afterwards, wash your hands with soap and water.

Three-toed box turtle

# SUMMER

## Free Your Fish

If you don't intend to eat your catch, release a fish carefully so it has the best chance to survive. If possible, don't take a fish out of the water. If you must, wet your hand before handling it. Don't squeeze the fish too hard, and never put your fingers in its eyes or gills. If the fish has swallowed the hook, don't remove it. Cut the line instead.

Bluegill

## Adopt a Stream

Streams are nature's blood vessels, and about 110,000 miles of water-filled arteries flow through Missouri. Join a Stream Team to check water quality, pick up litter, improve habitat for aquatic critters, and nurse sick streams back to health. For details, flow over to [mostreamteam.org](http://mostreamteam.org).

## Bee Helpful

Bumblebees are VIBs — very important bugs! They carry pollen from flower to flower, which helps plants make seeds. But some of Missouri's bumblebees are in trouble. You can help biologists learn how they're doing in your area by counting bees for the Missouri Bumblebee Atlas. For details, buzz over to [mobumblebeeatlas.org](http://mobumblebeeatlas.org).

Common eastern bumblebee

## Grow Native

Bees, butterflies, and other pollinators are disappearing in alarming numbers. To bring back the buzz, plant native wildflowers in your yard. Native plants are adapted to Missouri's weather, they need less water, and they provide the best food for wildlife. For ideas about what to plant, flutter over to [grownative.org](http://grownative.org).

## Count Some Quail — and Turkeys, Too

Northern bobwhites and wild turkeys are two of the Show-Me State's best known birds. To keep track of their numbers, biologists need folks across Missouri to count them. To learn how to help, flock to [mdc.mo.gov/wildlife/wildlife-surveys](http://mdc.mo.gov/wildlife/wildlife-surveys).

Wild turkey

Northern bobwhite

Prairie blazing star

Purple coneflower

New England aster

Gray-headed coneflower

### *Tag Monarchs*

In mid-September monarch butterflies flutter south to Mexico. You can help biologists track their movements by catching migrating monarchs and putting identification tags on their wings. To learn more, flitter over to [monarchwatch.org](http://monarchwatch.org).

### *Bash Bush Honeysuckle*

Bush honeysuckle is an invasive shrub that's eating Missouri. It spreads quickly and crowds out critter-friendly plants. Because it stays green after other plants turn brown, fall is the perfect time to find and remove it. For honeysuckle-busting tips, visit [short.mdc.mo.gov/ZCi](http://short.mdc.mo.gov/ZCi).

### *Multiply Milkweed*

For every monarch you see today, 20 years ago there were four more. You can help bring their numbers back up by collecting milkweed seeds — a monarch caterpillar's favorite food — and planting them in your yard. For a detailed growing guide, visit [short.mdc.mo.gov/4Nr](http://short.mdc.mo.gov/4Nr).

### *Leave the Leaves*

Fallen leaves add nutrients to the soil, create a layer of mulch that holds moisture in the ground, and provide a blanket that protects insects and other animals during winter. So give your rake a break, and let leaves lie on the ground until spring.

### *Follow the Rules*

Hunting and fishing regulations keep people safe, give all Missourians a fair chance to catch a fish or harvest a deer, and ensure wildlife numbers are healthy now and in the future. Whether you're sitting in your deer stand or duck blind, be sure to follow the rules!

# BALD EAGLE

## SKY PIRATES

Eagles often steal prey from other animals and even snatch fish from anglers and ducks from hunters.

## WIND-WHIPPING WINGSPAN

With wings that stretch farther than the height of your bedroom door, an eagle can soar for hours or pluck up fish with ease.

## NOT BALD

Bald eagles aren't bald. Adults have white feathers on their heads, while young eagles have brown feathers.

## POWERFUL PEEPERS

Although their eyes are about the same size as yours, an eagle can spot a rabbit from 2 miles away.

**GET A GRIP!**

An eagle's talons are needle-sharp, and their grip is 10 times stronger than a human's.

**A BEAK THAT'S ALL BUSINESS**

A massive, hooked beak helps an eagle rip apart fish and fowl.

# WILD WORKOUT

**W**ild animals are the world's best athletes. They have to be strong, fast, and flexible to survive. If you've spent the holidays hibernating, maybe it's time to unleash your inner beast. Get moving, get fit, and have fun with these animal-inspired exercises.

## DOWNWARD DOG

When they wake from a nap, coyotes like a good stretch. You can warm up the muscles in your legs and arms with this pose.

Start on your hands and knees. Lift your knees and tuck your toes against the floor. Push your hips backward to straighten your arms and legs, so your body makes an upside-down "V." *Take 10 slow, deep breaths and then lower your knees back to a crawling position.*

## HUMMINGBIRD HOVER

Hummingbirds flap their wings to hover so they can sip nectar from flowers. Flapping your arms in a similar fashion works muscles in your chest, shoulders, and arms.

Hold your arms straight out at your sides. Quickly rotate your arms, making little circles in the air with your hands. *Flap as fast as you can for a full minute. Rest, then do circles in reverse for another minute.*

### FITNESS FEAT

A ruby-throated hummingbird's wings normally flap about 50 times a second. But during high-speed maneuvers they can flap up to 200 times a second!

### FITNESS FEAT

To escape danger or run down fleet-footed prey, coyotes can sprint short distances at a blistering 45 miles per hour. Now that's doggone fast!

# BOBCAT BEND

Just like a house cat, bobcats stretch every chance they get. And maybe they're on to something! Bending like Bob makes your back stronger and helps you chill out if you're stressed.

Start on your hands and knees. As you slowly breathe in, lift your head, push your chest forward, and let your belly sink toward the floor. As you exhale, arch your back upward — like a happy cat — and let your head relax toward the floor. Repeat five times or until your stress melts away.

## FITNESS FEAT

Although a bobcat is only about twice as big as a house cat, the wild feline can leap over 10 feet straight up!

# ROLY-POLIES

Holy moly! It's a roly-poly. When threatened, pill bugs curl into a ball. You can do the same to target the muscles in your belly.

Start in a sitting position with your arms held out to the sides, your legs bent at the knees, and your feet off the floor. Lean slightly backward, bring your knees to your chest, and wrap your arms around them. While balancing on your bottom, straighten out your legs and arms. Repeat 20 times without letting your feet touch the floor.

## FITNESS FEAT

Like their lobster and shrimp cousins, roly-polies breathe with gills, which explains why they live under logs and in other damp places.

# INCHWORMS

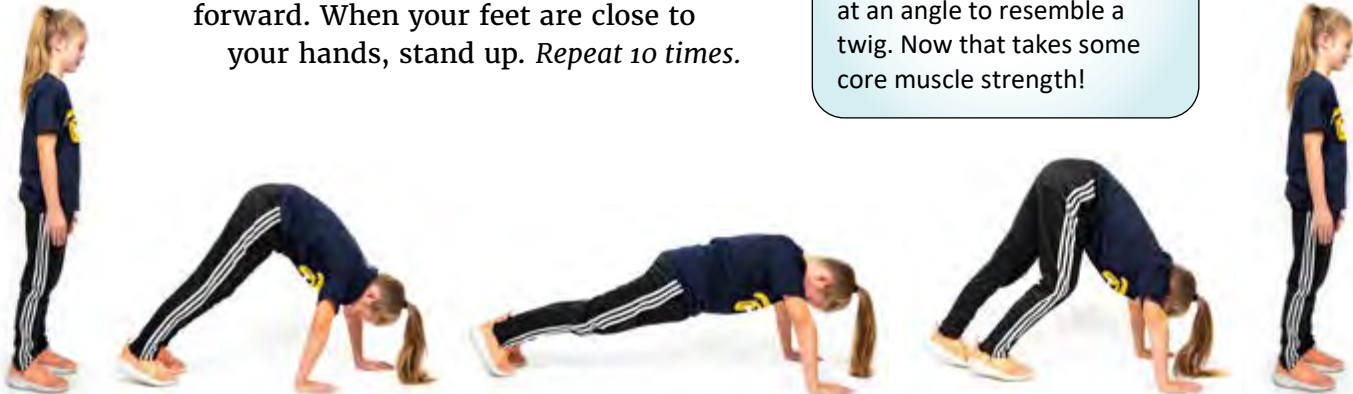

An inchworm has legs at both ends of its body but none in the middle. Scoot and scrunch like this wiggly caterpillar to work muscles all over your body.

Start by standing upright. Bend forward and place your hands on the ground. Keep your feet planted and slowly walk your hands away from your body until you're in a pushup position. Keep your hands planted and slowly walk your feet forward. When your feet are close to your hands, stand up. *Repeat 10 times.*

## FITNESS FEAT

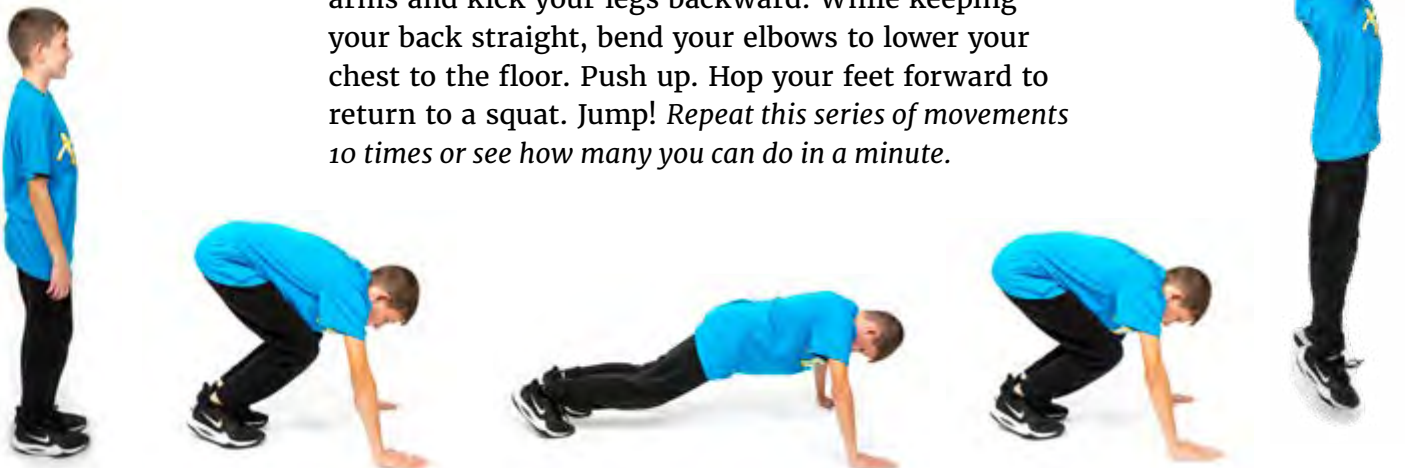

To hide from predators, some inchworms anchor their back legs and extend their bodies at an angle to resemble a twig. Now that takes some core muscle strength!

# AIRBORNE ARMADILLO

*Sproing!* Nine-banded armadillos spring straight up when startled. Mimic this movement to get stronger, burn calories, and build endurance.

From a standing position, squat down and put your hands flat on the floor in front of your feet. Lock your arms and kick your legs backward. While keeping your back straight, bend your elbows to lower your chest to the floor. Push up. Hop your feet forward to return to a squat. Jump! *Repeat this series of movements 10 times or see how many you can do in a minute.*

# BEAR CRAWL

Black bears lumber around to search for berries, acorns, and insects to eat. Crawling around like a bear is sure to make you hungry because you'll use nearly every muscle in your body.

Start on your hands and knees. Lift your knees off of the ground, keep your back straight and your body low. Crawl forward by moving your left arm and right leg at the same time, then your right arm and left leg at the same time.

*Crawl for a full minute, rest, and repeat five times.*

## FITNESS FEAT

Though they look chunky, black bears can reach speeds up to 30 miles per hour and climb 100 feet up a tree in seconds.

## FITNESS FEAT

Armadillos can leap 4 feet into the air when frightened. This gives the armored animals a jump on hungry predators, but it doesn't work so well for dodging cars.

# SUPER SQUIRREL

To glide, a flying squirrel stretches out furry flaps of skin between its arms and legs. Pretend you're a squirrely skydiver to make your back and belly stronger.

Lie facedown with your legs straight and your arms stretched out in front of you. Slowly raise your arms and legs off of the floor. You should feel your back muscles get tight. Hold this position while you count to five. (Be sure to breathe!) *Repeat 10 times.*

## FITNESS FEAT

With a lofty launch site and a strong tailwind, flying squirrels can glide nearly 200 feet — about as far as five school buses parked end-to-end.

# SOARING EAGLE

Eagles stretch out their wings to soar through the sky for hours. You can make the muscles in your belly, back, and arms sore (in a good way) with this exercise.

Lie on your right side with your legs extended. Tighten the muscles in your belly, back, and hips. Breathe out and push your body up so your knees, hips, and chest are off the ground and form a straight line. Lift your left arm up so your body forms a “T.” Bring your left arm down, wrap it around your body, and lift it up to form a “T” again. *Do five soars, then flip over (so your left side starts on the floor) and do five more.*

## FITNESS FEAT

Bald eagles can fly up to 10,000 feet high and dive down at speeds of over 100 miles per hour.

# WOOD DUCK WADDLE

On land, wood ducks waddle to get from place to place. Try waddling for a while to make your legs stronger and burn up extra energy.

Crouch down into a squatting position and hold your arms in front of you for balance. Stay in a low squat as you take four steps forward and four steps backward. Keep your back straight and move only your legs. *Repeat five times.*

## FITNESS FEAT

Newborn wood ducks may waddle for over a mile while following mom from their nest to water.

# BULLFROG HOPS

When startled, American bullfrogs squeak out high-pitched yelps and leap quickly to safety. Mimic their motion to make your legs stronger.

Start in a squat with your hands flat on the floor. Leap up and forward then land in a squat. Leap up and backward then land in a squat. Repeat 10 times.

## FITNESS FEAT

An 8-inch-long bullfrog can leap over 7 feet in a single hop. If you could jump like that, you could easily leap the length of a school bus.

# LIZARD LIFTS

Boy collared lizards do pushups to show off for girl lizards. You can do pushups — whether you're a boy or a girl — to make your back, chest, and arms stronger.

Lie on your belly. Place your hands on the floor a little farther out than your shoulders. Place your toes flat on the floor. While keeping your back and legs straight, push up until your arms are extended. Lower yourself down until your upper arms are parallel to the ground, then push up again. Repeat 10 times or see how many you can do in a row. If this version is too uncomfortable, try balancing on your knees instead of your toes.

## FITNESS FEAT

When a collared lizard needs to scurry in a hurry, it stands upright and runs on its hind legs. The rapid reptiles can reach speeds of up to 15 miles per hour!

## Animal Autographs

MANY OF MISSOURI'S WILD MAMMALS MOVE ABOUT AFTER THE LIGHTS GO OUT.

And though you might miss these nocturnal critters in the flesh and fur, you can see where they've wandered if you learn to spot their footprints.

**INSTRUCTIONS** This field is covered with footprints! Can you follow each set of tracks to find out which animal made them?

# GET OUT!

FUN THINGS TO DO  
AND GREAT PLACES  
TO DISCOVER NATURE

## TRUMPETER SWAN NUMBERS PEAK

in Missouri in mid-January. Head to a wetland for a chance to get a glimpse of these elegant and enormous waterfowl.

**CEDAR WAXWINGS** are named for the **waxy red tips** of their wing feathers. In winter, they gather to feed on the berries of cedars, dogwoods, and hawthorns. Find a flock by listening for their high, thin whistles. To learn their calls, visit [allaboutbirds.org/guide/cedar\\_waxwing](http://allaboutbirds.org/guide/cedar_waxwing).

*Turkey tail*

*Artist conk*

*Oyster mushroom*

A walk in the winter woods is a great time to **FIND SOME FAR-OUT FUNGUSES**. Look for turkey tail, artist conk, and oyster mushrooms growing on trees and dead logs.

*Purple finch*

*House finch*

*Pine siskin*

*American goldfinch*

In winter, finches flock to feeders to feast on seeds. Grab a bird guide and a pair of binoculars and see if you can **SPOT THESE FEATHERED FRIENDS** from the finch family.

In February, **SKUNKS** leave their dens to search for food and mates. But when they waddle across roadways, they're no match for cars. You can save hungry, lovesick skunks by helping grown-ups watch out for them while driving.

**WHAT  
IS  
IT?**

— FROM PAGE 3 —

## NORTHERN CARDINAL

Birds come in all shapes and colors, but with its punk-rock crest and bold color, it's hard to mistake a northern cardinal. Cardinals live in shrubby thickets in backyards, weedy fields, and forest edges. They eat berries and seeds, which they crack open using stout beaks. In the spring, male cardinals sing cheerful songs from the tops of trees. Females sing on their nests.

**GO FIND IT!**

Cut out this critter card and take it with you outside.  
How many of the things on the card can you find?

## RED-HEADED WOODPECKER

### KICKSTAND TAIL

Woodpeckers prop their strong, stiff tail feathers against tree trunks for balance.

### HOME SWEET HOLE

Woodpeckers raise their babies in holes they hammer into trees.

### HELMET HEAD

A spongy skull absorbs the shock of a woodpecker's pounding. The brain is packed tightly inside so it doesn't slosh around.

### HARDCORE HOARDER

Red-headed woodpeckers hide acorns — in tree cavities, holes in fence posts, and rain gutters — to eat during winter.

### GRAY "HAired" YOUNGSTERS

Young woodpeckers don't get a striking red head until their second year of life. Until then, their heads are gray.
